Debug Logs

A debug log records database operations, system processes, and errors that occur when executing a transaction or while running unit tests. The system generates a debug log for a user every time that user executes a transaction and the user has a trace flag with start and expiration dates that contain the transaction's start time. You can monitor and retain debug logs for the users specified below. One SFDC_DevConsole debug level is shared by all DEVELOPER_LOG trace flags in your org.

View: All Create New View

User Trace Flags						
Action	Name	Log Type	Requested By	Start Date	Expiration Date	Debug Level Name
